# **Acknowledgment**

All bugs documented in this report were identified in the version of the application that was sent to me via cross-testing team on **Sunday at 7:00 PM**, the day following the project deadline. No updates or patches released after this time were accepted or included in the testing scope

- Title: "Create Company" Feature Fails with Large Image Uploads
- **Description:** The "Create Company" functionality only works when the user uploads a small image (e.g., less than 0.5 MB). Attempting to upload larger images results in failure, with an error message "Failed to create company"

#### **&** Bug ID: BUG-002

- Title: Sidebar Icon Only Clickable on Home Page
- **Description:** The sidebar icon is functional only on the Home page. When the user navigates to other sections such as *My Network* or *Jobs*, the sidebar icon becomes unresponsive and cannot be used to open the sidebar menu.

# **Lead of the State of the State**

- **Title:** Messaging Module Not Functional for New Connections
- **Description:** The messaging feature fails when the user attempts to message a newly added connection. Instead of opening a chat window, the system returns a placeholder message stating, "Message is not implemented."

- Title: "My Network" Page Incomplete and Non-Functional
- **Description:** The "My Network" page does not function as expected. It fails to provide the user with recommended connections and does not allow user search within the network. As a result, users cannot explore or expand their network from this section.

#### **Lang ID: BUG-005**

- **Title:** "Follow Company" Feature Not Working Properly
- **Description:** The "Follow Company" feature does not retain the user's action. When a user clicks to follow a company, then navigates to another tab and returns to the same company profile, the follow status is not saved—the user appears as if they are not following the company.

- **Title:** Search Function Not Working Across Multiple Tabs
- **Description:** The search functionality for users, companies, and posts is non-functional in both the *Home* and *My Network* tabs. Entering search queries yields no results, and the search interface appears unresponsive.

• **Title:** Salary Filter in Jobs Page Not Functioning Properly

• **Description:** The salary filter on the *Jobs* page updates the UI to display new job listings; however, it does not actually apply the salary filter. Jobs outside the selected salary range are still shown, indicating that the filter is only affecting the interface and not the underlying data.

#### **Lead of the State of the State**

- **Title:** User Session Not Maintained After App Restart
- Description: When the user closes the app without signing out, the session is not preserved. Upon reopening the app, the user is required to sign in again instead of being automatically logged in, indicating that session persistence is not implemented

- **Title:** Back Button Redirects to Registration Page
- **Description:** Pressing the back button on the *Home* page unexpectedly redirects the user to the registration page instead of navigating to the previous screen, causing a disruption in the user flow.

- **Title:** No Granular Control Over Connection Requests
- **Description:** The user lacks detailed control over who can send them connection requests. The current implementation only allows enabling or disabling connection requests from *all* users, without options to filter or limit requests based on specific criteria (e.g., mutual connections, industry, or verified profiles).

# **Bug ID: BUG-011**

- Title: "Report Post" Feature Missing
- **Description:** The application currently lacks a "Report Post" feature. There is no visible option for users to report inappropriate or harmful content, indicating that this functionality has not been implemented at all.

- **Title:** "Report User" Feature Missing
- **Description:** The application does not provide a way for users to report other users. There is no visible option or functionality to flag inappropriate behavior or abuse, indicating that the "Report User" feature has not been implemented.

#### **Lesson** Bug ID: BUG-013

- Title: Connection Status Incorrect After Request Acceptance
- Description: When a user receives and accepts a connection request, the
  connection status does not update correctly. Upon viewing the other person's
  profile, the status still shows as "Pending" instead of reflecting the successful
  connection.

# 🐛 Bug ID: BUG-014

- Title: Company Domain Name Not Saved on Create/Edit
- **Description:** When creating or editing a company profile, the domain name field does not retain the entered value. After saving, the domain name is either lost or not displayed, indicating a failure in data persistence for this field.

#### **& Bug ID: BUG-015**

- Title: Third-Party OAuth Sign-In Not Working
- **Description:** The sign-in options using third-party OAuth providers such as Facebook and Google are non-functional. When users attempt to authenticate via these services, the process either fails to initiate or does not complete successfully, preventing users from logging in through external accounts.

- **Title:** Admin Lacks Option to Ignore or Unflag Reported Posts
- **Description:** In the admin panel, reported posts can only be deleted. There is no option for the admin to ignore or unflag a post, limiting moderation actions and forcing deletion even in cases where no violation exists.

- **Title:** Admin Cannot Manage User Accounts (Delete, Ban, or Block)
- **Description:** The admin interface does not provide any options to delete, ban, or block user accounts. This limits the ability to enforce community guidelines or take action against users who violate terms of service.

#### **Bug ID: BUG-018**

- Title: Subscription Details Not Updated After Premium Upgrade
- **Description:** After upgrading to a premium account, the "Manage Subscription" section does not reflect the updated subscription status or details. This can cause confusion for users who have successfully completed payment but still see outdated information.

#### **Bug ID: BUG-019**

- Title: "Share Post" Feature Not Working
- Description: The "Share Post" feature is not functioning as expected. When a user attempts to share a post, no action is triggered, and the post is not shared with others, indicating that the functionality has not been properly implemented or is malfunctioning.

- **Title:** Missing Mentions and User Tagging in Comment Replies
- **Description:** When replying to a comment, there is no option to mention other users or tag them within the reply. This limits user interaction, as the ability to notify or link other users in replies is not available.

• Title: Analytics Displayed on Profile Page

• **Description:** When a user views another user's profile, analytics (such as views, interactions, etc.) are mistakenly displayed. This information should be restricted to the profile owner or admin, and not visible to users viewing other profiles.

# **Lang ID: BUG-023**

• Title: "Post Document" Feature Not Working

• **Description:** The "Post Document" feature is non-functional. When attempting to upload or share a document, the system does not process the file, and no error message is displayed, preventing the user from sharing documents.

#### 🌄 Bug ID: BUG-024

• **Title:** Login Fails with Case-Insensitive Email Entry

• **Description:** When entering a correct email address with different letter casing (e.g., using uppercase letters), the login attempt fails. The system should allow for case-insensitive email matching but currently rejects emails based on letter casing.

#### 🐛 Bug ID: BUG-025

• Title: Account Creation Allowed with Invalid or Malicious Characters in Name

• **Description:** The system allows users to create an account even when entering invalid or potentially malicious characters (e.g., special characters like <>, or scripts) in the name field. This can lead to security vulnerabilities or data integrity issues.

- **Title:** Account Creation Restricted to Specific Email Domains
- **Description:** Users can only create an account if they provide an email address from the "Ascend" or another specific email platform. The system does not accept emails from other domains, limiting the registration process to a specific set of email providers.

#### 🐛 Bug ID: BUG-027

- **Title:** Users Unable to Add Links to Posts
- Description: The system does not allow users to add clickable links to posts. When
  a user attempts to include a URL, the link is displayed as plain text without any
  clickable functionality, preventing users from sharing external resources or
  references.

- **Title:** "Post Announcement" Feature Not Implemented for Companies
- **Description:** The "Post Announcement" feature is completely missing for companies. There is no option or functionality available to create and publish announcements, preventing companies from sharing important updates or information with their followers.

#### **Lesson** Bug ID: BUG-029

- **Title:** Companies Unable to Manage Followers
- **Description:** Companies cannot manage their followers. There is no option to view, block, or interact with followers, limiting the company's ability to control or engage with its audience effectively.

#### **L** Bug ID: BUG-030

- Title: Company Analytics Dashboard Not Implemented
- **Description:** The "Company Analytics Dashboard" feature, which allows companies to view important metrics such as job views, profile visits, and other performance data, has not been implemented. As a result, companies are unable to track engagement or assess the effectiveness of their posts and activities.

- Title: "Cancel Premium Subscription" Feature Not Working
- **Description:** The "Cancel Premium Subscription" feature is non-functional. When users attempt to cancel their premium subscription, the system does not process the request, and the subscription remains active, preventing users from unsubscribing as intended.

- **Title:** "Renew Subscription" Feature Not Implemented
- **Description:** The "Renew Subscription" feature is missing. Users are unable to renew their subscription through the platform, as there is no option available to initiate the renewal process, leaving them unable to extend their premium access.
